

Theme: Education

Topic: Web Portal for student's and teacher's grievances

Idea Owner: the_A_team

Description:

The government of India spends crores and crores of rupees for the development of the country. And not just money, it also works on areas where some modifications and changes are needed, as per the complaints and grievances made by the public. But since these complaints are so many in number, it's quite impossible for the government to take each of them into consideration. So to curb this problem, we have come up with a solution, which will help not just the government but also the students and their teachers.

Our idea is to design a web portal where the students and the teachers from all over the country can air their grievances regarding the education system. The grievances will be listed on the portal on the basis of decreasing order of their frequencies. For example, if 2000 students have complaint A , 1000 have complaint B and 700 have complaint C , the grievances on the portal will be shown as

1. Complaint A
2. Complaint B
3. Complaint C

This way it would be easier for the government to work on the burning issues of the students and the teachers. Also, the most prevalent problems related to education would be solved.

Also, given there may be some mischievous students who might put some compromising and illicit content on the portal in the name of grievances, such messages would be automatically put into spam, so that only meaningful and genuine problems show up on the portal.

People will also be able to keep a track of how much work has been done on a specific complaint. This will make things transparent.
